§1 Introduction to Deep Learning in Python

§1.1 Basics of deep learning and neural networks

§1.1.1 Introduction to deep learning

**1. What is the value of interactions for neural networks?**

Deep learning uses especially powerful neural networks with almost anything such as *text*, *images*, *videos*, *audio*, or *source code* because neural networks really well account for interactions.

2. How do interactions work in neural networks?

3. Practice question for comparing neural network models to classical regression models:

- Which of the models in the diagrams has greater ability to account for interactions?

Model 1

Inputs	Hidden Layer	Prediction
# Accounts		
# Children		Output

Model 2

Inputs	Hidden Layer	Prediction
# Accounts		Output
# Children		

☐ Model 1.

☒ Model 2.

☐ They are both the same.
